

EMPLOYEE AWARENESS SESSION

Phishing Awareness & Cyber Hygiene Training

Pause. Verify. Protect access.

THE CORE IDEA

Phishing uses deception to steal access

Social engineering messages impersonate trusted sources to trick people into revealing credentials or sensitive data.

Pause

A familiar name or urgent request can still be a trap.

The message is designed to make the unsafe action feel reasonable.

RECOGNIZE THE CHANNEL

Phishing arrives through more than email

The channel changes. The deception pattern stays familiar.

Email phishing

A message asks you to click, open, or sign in.

Spear phishing

A message is aimed at a specific person or team.

Smishing

A text message pushes a link or urgent action.

Fake login page

A look-alike page captures what you type.

THE PAUSE SIGNAL

Pause when a message pushes urgency

Pressure is a cue to verify, not a reason to hurry.

01

Pressure

Threats or pressure to act immediately.

02

Mismatch

Look-alike sender domains, such as `support@micros0ft.com`.

03

Unexpected

Attachments or links you did not expect.

Grammar can look polished; check the sender and request, not spelling alone.

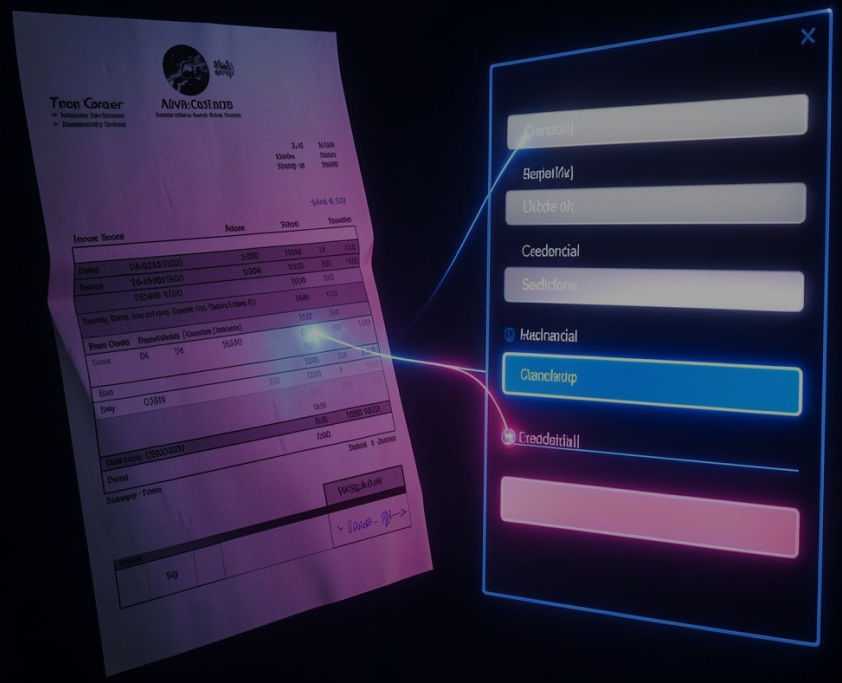

ILLUSTRATIVE SCENARIO

One unverified invoice link can expose credentials

An unexpected invoice prompts an employee to open a look-alike sign-in page and enter company credentials.

The credentials are compromised.

Fake invoices and payment links are common phishing lures.

Fictional example: the link is the lure.

THE HABIT

Build a pause-and-verify habit

Access

Enable multi-factor authentication to add a second login check.

Verify

Verify sender addresses and requests through a known channel.

Passwords

Never share passwords.

PRACTICE OUT LOUD

Quick quiz: what would you do?

Answer first. Then name the safe next step.

01

Click a link?

It asks you to verify banking details immediately.

Answer: No. Verify independently.

02

Open an attachment?

It is an unexpected invoice attachment.

Answer: No. Report it first.

03

Trust perfect spelling?

The message looks polished and professional.

Answer: No. Polish does not prove legitimacy.

WHEN SOMETHING FEELS WRONG

Report fast; use trusted support

Report

Use your organization's report-phishing button or IT/security channel: [insert internal contact or process].

Do not engage

Don't click, reply, or open attachments in a suspicious message.

Get help

If you entered credentials, contact IT/security promptly and follow their recovery steps.
