SECURE CODE ASSESSMENT REPORT

Task: Task 3 - Secure Code Assessment (CodSoft)

1. Vulnerability 1: SQL Injection

Severity: High

Detail: Input was formatted directly into SQL query strings, allowing authentication bypass.

Fix: Implemented parameterized queries with placeholders (?).

2. Vulnerability 2: Plaintext Password Handling

Severity: High

Detail: Passwords were processed and stored without hashing.

Fix: Applied SHA-256 cryptographic hashing prior to database operations.
